About Me

After 8 years in pharmacy career, I decided to go for a new challenge. While learning a few courses on freeCodecamp, I realized that this was what I had been looking for. Passionate about coding, I decided to take it more seriously by pursuing a new degree on computer science and joining a Javascript bootcamp which took me around 6 months to complete, along with a self-taught course like The Odin Project. I gained solid experience through exercises and projects during training including some fullstack applications which I built it from scratch.

Skills

- Front-end dev using vanilla JS, React, Nextjs.
- Back-end dev using NodeJS, ExpressJS
- Database SQL and NoSQL integration and schema design
- ORM, ODM using prisma, sequelize, mongoose.
- Version Control and code maintenance using git, Github, Gitlab Bitbucket.

Certificates

- Software Park Thailand: Fullstack Javascript codecamp
- HackerRank: React Basic
- Meta: Programming with JavaScript
- Meta: Version Control

Experience

Software Engineer

Shippop | DEC 2022

Developed new admin page so the customer service department could list out long-waiting orders in spreadsheet for further investigation. In order to obtain the orders, database queries was performed properly including input validation and clean coding.

Personal Projects

Tell your pharmacist

Telepharmacy application where on customer side, customers could search for available pharmacies based on their geolocation, chat to pharmacists, and perform online payment. While pharmacy could track to order, dispense drugs and manage store inventory.

Switter

A fullstack social media app where users can post, comment, follow other users and update their profiles.

Polluchek

A web-based application for tracking local air quality indexes (AQI) around the world. The air quality and image data used displayed were pulled from public API.

Quizhub

Built with react and a public quiz API to test knowledge. Number of questions, question categories, and level of difficulty can be selected.

Education

Fullstack Javascript codecamp

MAR - AUG, 2022

Software Park, Thailand

Learned HTML, CSS, Javascript, NodeJS, SQL and other relevant fullstack technologies.

Computer Science, Bachelors

2019-2022

University of People

Courses taken: Computer system, programming basic, Java programming, Web programming, Operating system, Statistics, College algebra.
